

Using Yes & No for Polling ~ It's coming back!

(February 5, 2021)

Zoom update 5.5.0 restored the ability to use Yes/No for quick polling. But host and all participants need to be updated to the latest release (now 5.5.1); and as I'm writing this IOS has not yet updated on my iPhone.

So how will reactions work with this update?

Again, here's how reactions box looks now:

1. The top row of reactions will continue to disappear after about 10 seconds.
2. Raise hand, Yes, No, GoSlower, and GoFaster are feedback and remain visible until explicitly removed.
3. Feedback entries are mutually exclusive. (If you select a second one, the first is replaced.)
4. The host and co-hosts will see counts for any feedback at the bottom of the participants screen.
5. Individuals may remove feedback entries by clicking on the reaction again.
6. Hosts and co-hosts can click on the three dots at the bottom of participants screen (circled below in red) and then select "Clear All Feedback".
